

Polar Pearl Metallic / Chrome Pearlescent Metallic / Metallic Glossy Paper

Paper: Photobase base stock

Paper Weight: 66lb / 255gsm

Thickness: 10.4mil

Coating: Microporous inkjet

Color: Pleasing warm white

Printable: One side only - no printing on back

Known by several names this Inkjet Metallic Photo Paper has an extremely rich, smooth surface texture with just a hint of metallic appearance and a high gloss surface aesthetic. Pearlescent Metallic Photo Paper uses patented ceramic microporous coating technology which allows users to stabilize color easily when printing.

Pearlescent Metallic Photo Paper features the same aspects as its lab equivalent - a high gloss finish and a pearlescent base stock that yields an elegant iridescence in your images. Similar in appearance to a Silver Halide print.

Pearlescent Metallic will add luminance and depth to any image. Some types of photography better lend themselves to being printing on a metallic surface. Images with solid colors, reflections, and negative space (whites) will look especially stunning on this new paper. It is also absolutely beautiful for high contrast, B & W and bright color prints

Pearlescent Metallic Photo Paper is sure to meet the needs of photographers seeking a paper with a slightly metallic surface and higher gloss as this paper looks much like traditional 'wet' photo paper with the control of an inkjet printer. Get creative and add a metallic luster to your prints and try Pearlescent Metallic Inkjet Photo Paper today.
